- Yang Tsun-yi. 1960. On the discovery of a Scythic ophiuroid from Kueichou, China. *Acta Palaeontologica Sinica*, vol. 8, no. 2 (April 1960) pp. 159-163, plate I. [Lower Triassic, but included here because of unusual features: no ventral shields; 5 genital pores situated atop the buccal shields(?) in interbrachial position; the specific name Ophioderma schistovertebrata refers to the cleft between the two halves of vertebral ossicles (ventral view)]
- Yang, Zunyi, Yin Jicheng and He Tinggui. 1982. Early Cambrian trace fossils from the Emei-Ganloo region, Sichuan, and other localities. -- *Geological Review* 28:291-298. [not seen; source Crimes & Jiang Zhiwen 1986; regarding Cambrian Asteriacites]
- Young, G. A., R. J. Elias, G. S. Nowlan, D. M. Rudkin and E. P. Dobrzanski. 2004. Exploring an Early Palaeozoic tropical archipelago on the shores of Hudson Bay [abstract]. *The Palaeontological Association Newsletter* No. 57:135-136. ["ophiuroids"] [FH guesses these are the Lower Silurian ophiuroid mentioned by Rudkin to FH in personal communication]
